

ABSTRACT

An eye-surgical holed towel comprises a transparent PVC holed towel with two holes at a center thereof; a separable paper adhered to a backside of the holed towel; the separable paper having two holes; and an opaque
5 shielding sheet adhered to a front side of the holed towel and between the two holes of the holed towel; and a lower edge of the opaque shielding sheet being adhered upon the holed towel so that the opaque shielding sheet is turnable along the lower edge for shielding one eye of a user; The two holes of the separable paper are at positions corresponding to the two holes of the
10 holed towel. When the separable paper is torn, it can be placed upon the face of a user. The shielding sheet has a gluing section, when the separable paper is torn, it can be adhered to an eye of the user.
